

# Lock, stock and barrel

for the automotive industry

MCL CheckPoint - the compound  
management system

MCL GROUP

  
CheckPoint

MCL's experience in the development and deployment of hosted applications gives us a unique advantage over our competitors. This has been instrumental in bringing CheckPoint to you – an affordable stock tracking system that provides complete control over your inventory without your business having to invest in expensive equipment or technical expertise.

## Lock on to CheckPoint!

MCL CheckPoint gives you control and complete visibility of a vehicle's progress through all its stages of preparation, enabling performance gains through measurement against KPI's.

Improve your accuracy, optimise your productivity and save money – you could save as much as £10 per vehicle.

-  Reduce errors through automated data uploads
-  Enable fast-track for priority vehicles
-  Eliminate unnecessary vehicle movements
-  Improve stock flow – 'aged' stock highlighted
-  Eliminate lost stock and ensure all charges are raised
-  Reduce time to gate release
-  Easy analysis of performance against KPI's
-  Data exports for common file formats

"We stock checked 2,500 cars and found only 7 out of position. Prior to CheckPoint this would have been several hundred"

"This system has been proven to handle 50,000+ vehicles per year for Mazda, Kia and Daihatsu"

CAM Distribution

## Keep stock!

We understand how the smooth running and performance of your business is dependant on effective control of your inventory. MCL's compound stock management solution for the automotive industry, CheckPoint, is a highly effective control system that keeps track of vehicle related activities and movements.

## A barrel load of additional options

Radio Data Terminals or RFID - for real time bar code input to a central database for consistent, error-free input and minimum user intervention.
